

PORTFOLIO PRESENTATION

Daniel Fernandez

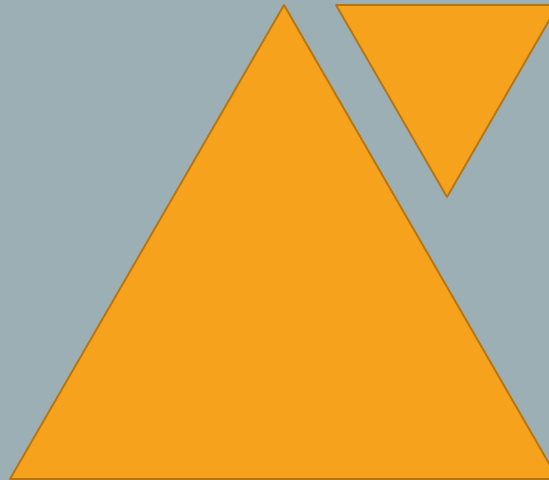

STRUCTURE

The idea was simple enough, create a webpage with four documents and stay away from SCSS and git branching for as long as I could.

Dedicated top navbar makes for easy transitions

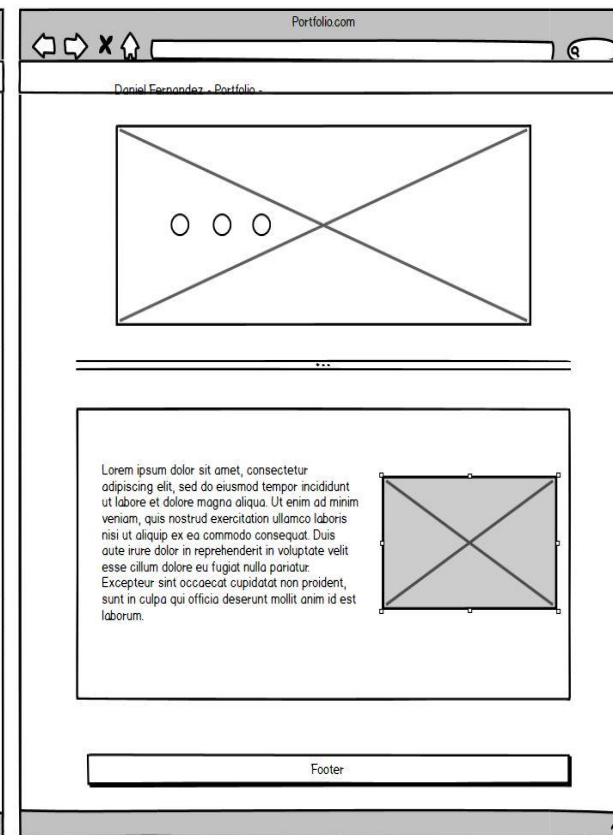

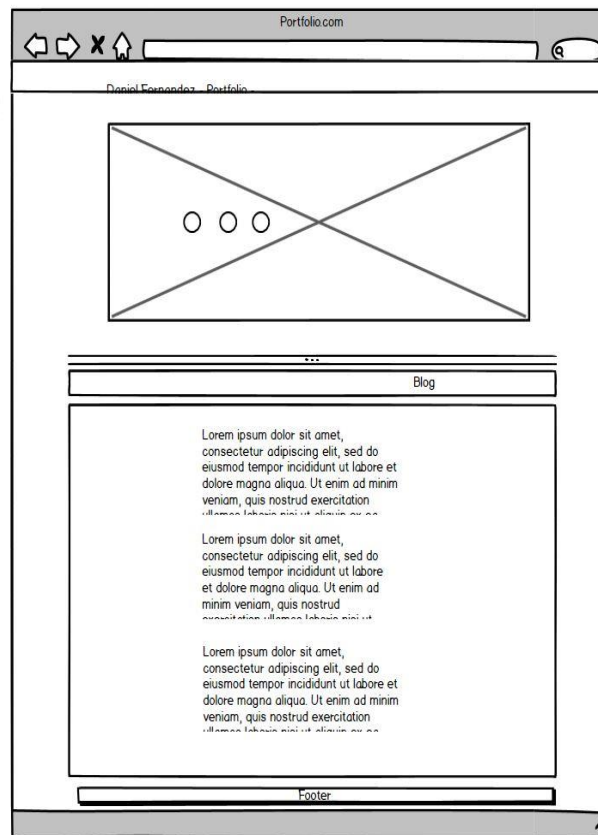

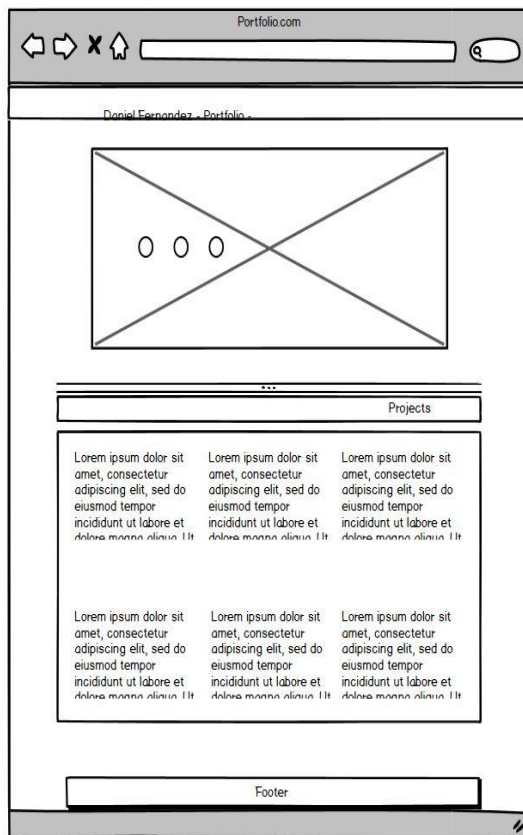

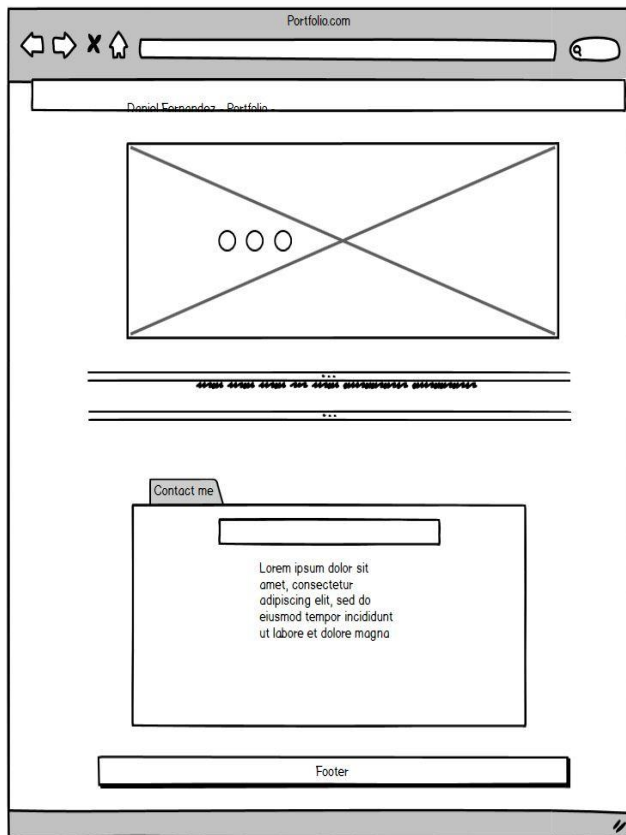

Initially wanted a parallax website but though that was not feasible for this project.

Responsive design allows for easy navigation on all platforms.

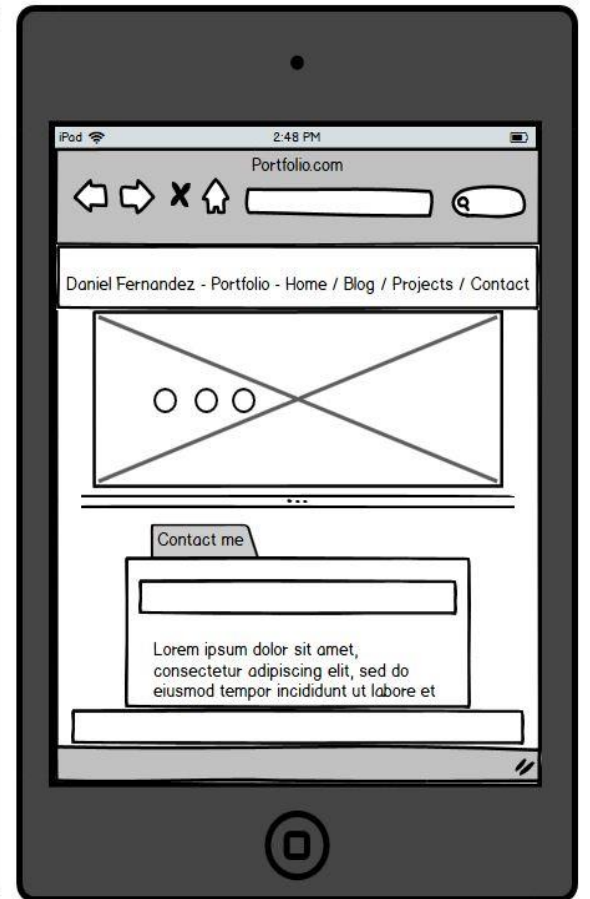

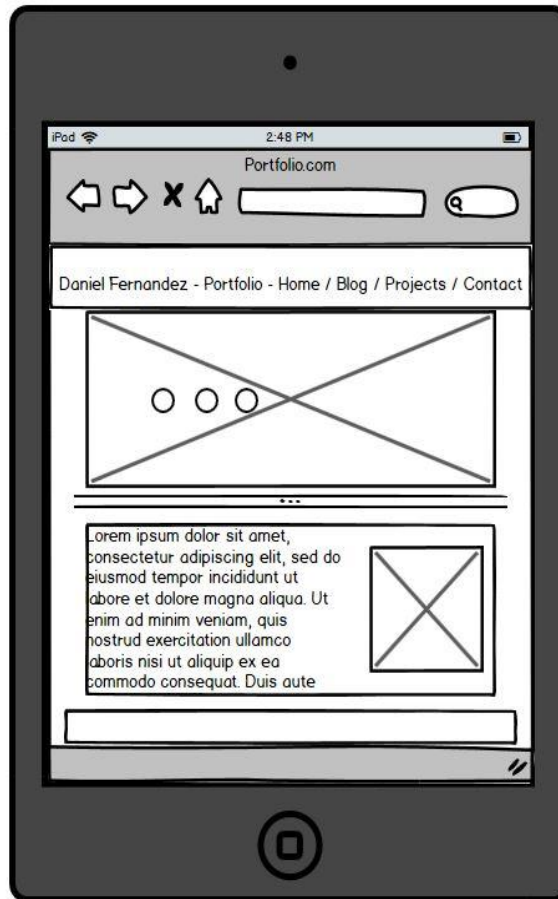

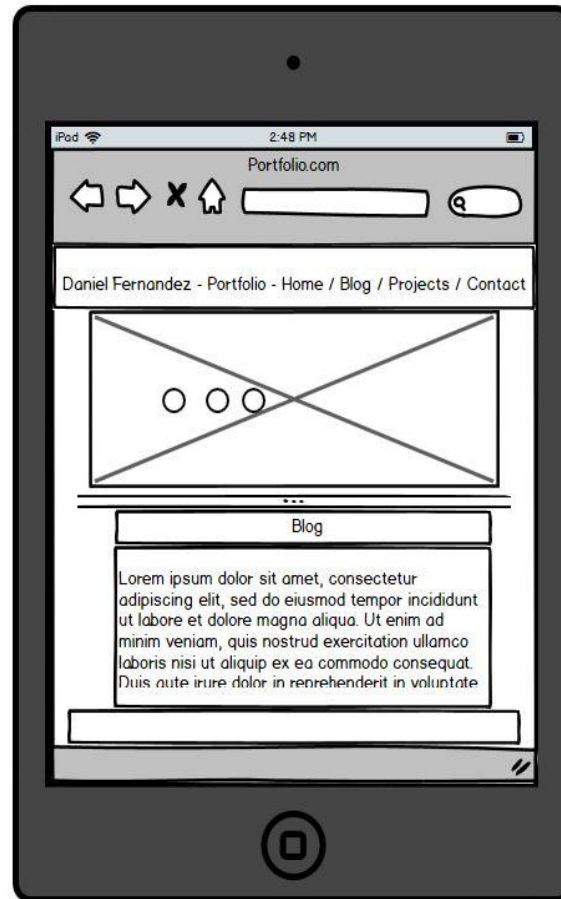

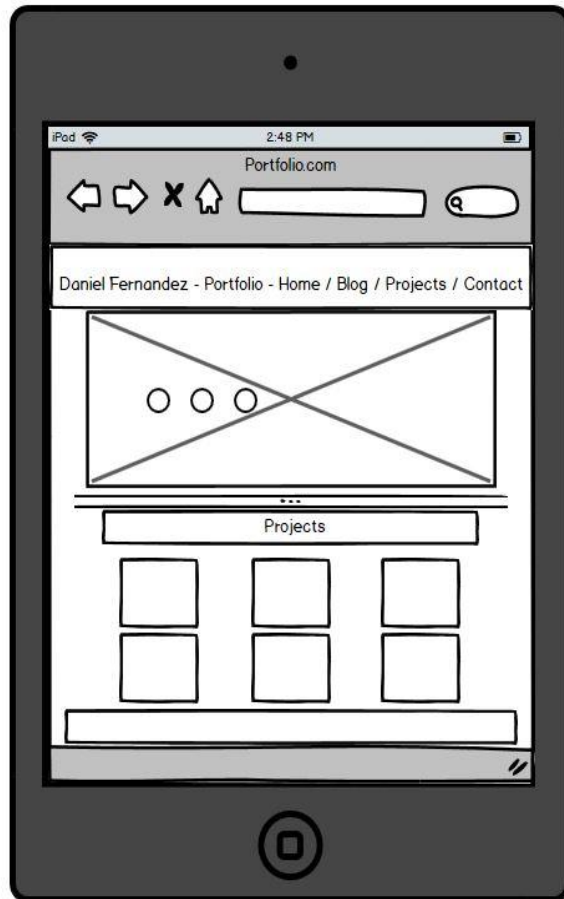

Site navigates to all pages from all pages. Initial design is to keep contact last so all pages are navigated and my work has been shown.

CRITIQUE

The original goal was to create something more personal to the viewer. The image constrained a lot of what I did and the color scheme was not what I was hoping for in the end. Learned that you could definitely make a website personal to you and not go about it by placing a massive picture of yourself on every page...

A better way of going about it could include small images and a color scheme that complements each other. Otherwise navigation, footer and styling of course could be better. In regards to simplicity I am happy.

CRITIQUE

May 4th....Afternoon challenge website had much nicer styling then what I envisioned for this project...Color tones of these sorts are much easier to work with and are duly noted.

STYLING

I think the simple design is further workable to appeals to audiences. Very simple navigation and styling allows users to see what they want and not have to scurry through my website at all to find my work or what they would be looking for.

Components in my website included; Google Fonts, Stocksnap.io, HTML, CSS, GRID/FLEXBOX, W3SCHOOLS (A LOT).

THANKS GUYS!
